

PRODUCT SPECIFICATION

Specify the STC Acoustic Pad in **Section 061600 Sheathing** under “Miscellaneous Products”

Resilient Pads: Extruded solid neoprene rubber for impact noise insulation in floor construction.

Acoustic Pad System by STC Sound Control.

Impact Noise Reduction: Δ IIC-23 according to ASTM E 2179.

INSTALLATION SPECIFICATION

Acoustic Floor Covering System: Wood panels supported by resilient pads.

1. Install wood strip perimeter supports (cut from 1/4"-thick wood panels) at slab terminations, edges of openings in slab, columns, pipe penetrations, and stair landings.
2. Adhere pads to underside of subfloor panel with pads overlapping at trailing edges for support of subsequent panels.
3. Adhere pads-on-panels complex to deck in running bond pattern.
